Dog Crates

“Nexus Pro”

Custom size crates created for you!

Pro Dog Crates are made to order for the size of your dog. We can build them to fit your van, car, or RV. Every crate is made to order. Custom sizes are our specialty.

If you want a Stacking Unit with a Rolling Cart, Grooming Top, Grooming Arm, or other Options, we calculate prices by the cubic inch. It costs no more to custom size a crate than for our standard sizes.

We look forward to building your crates!

Quality Construction

Pro Dog Crates are custom-built with high-strength, welded aluminum tubing which makes up the rigid frame.

Bar doors are constructed of solid aluminum rod welded into the door frame. Doors are attached with an all-aluminum hinge. Plastic front doors are available.

The frame and door aluminum is clear coated to protect white-coated dogs.

Impact resistant, textured, white ABS plastic is attached to the frame using adhesive and all-aluminum rivets.

Holes are created at the top of the sides and back for ventilation.

Both the aluminum framing and the ABS plastic make the crates lightweight, rust, and stain resistant.

Grooming tops are made of natural rubber. Adjustable grooming arms are made of aluminum rod and can be made foldable.

Drop handles are added to the front and back for easy carrying.

A flip latch and lock hasp are added to the door for safety and security.

The floor of the crate is sealed, forming a pan to keep liquids from leaking out of the bottom or leaking under the framing.

Rolling carts are made from aluminum tubing. Each cart has four 4" hard rubber casters — two lockable, swivel wheels and two rigid wheels. Two eyebolts are included on one end and a hole is drilled underneath each side rail for securing crates to the cart. Plastic may be added for a solid bottom cart.

Stacking Units

Crates can be made stackable (top-to-bottom or side-by-side). Small latches secure crates together.

Single(1), Double (2), & Quad(4) Stacks include a “Show Package” of:

- a grooming top for each top crate
- adjustable grooming arm(s)
- one lightweight rolling cart

Multiple Stacking Units can be constructed for Kennel Rooms.
